Summary

SITES

mittenclub.shopmitten.com (Mitten Club loyalty microsite, Next.js on Vercel, Batch loyalty platform) and shopmitten.com (Shopify store, where the shopping journeys ran).

WHEN

automated crawl of mittenclub.shopmitten.com 9:38-10:45 PM PT; manual journeys ~10:21-10:49 PM PT (screenshot times), Saturday 2026-09-26. Re-verification: Sep 26, 11:55 PM to Sep 27, 12:12 AM PT.

HOW

crawl with headless Chromium (desktop 1366x900, mobile 390x844) plus curl; journeys by hand in Chrome at 1280x800. Test account: throwaway mail.tm test inbox (address withheld), reserved fictional phone 313-555-0142. No test card was provided, so checkout stopped at the payment step. Nothing was purchased.

RULES

every number below is computed from pages.csv, links.csv, images.csv, checks.csv and journeys.csv (all rows are in all_checks.csv). Anything not checked is listed as not tested, never as a pass. Secrets are redacted.

All issues re-verified on Sep 27, 2026 (38 confirmed, 1 removed as incorrect, 1 not re-verifiable)

All 40 original issues were re-verified on a fresh session. **39** remain open (3 Critical, 8 High, 18 Medium, 10 Low). 1 was removed as incorrect, none were fixed since the first test, and 1 could not be re-verified (kept and marked).

02

Scorecard

Passed / checked, from the Sep 26 run. Where the metric was re-counted on Sep 27 the re-check value is shown under the card. Bar colour: green 90% and up, amber 60-89%, red below 60%.

Links working

551 / 551 **100%**

533 external, 18 internal links found on mittenclub.shopmitten.com.

Images loading whole

2447 / 2447 **100%**

835 site images + 1612 Google Maps widget images; 0 with naturalWidth 0 or incomplete.

Re-check Sep 27: **2506/2506**

Images with alt text

545 / 835 **65%**

Site images only (Maps widget excluded). 279 alt absent, 11 alt empty. Footer logo alt is also wrong on every page ("John Martin Logo").

Re-check Sep 27: **545/835**

Pages without console errors (incl. reCAPTCHA error)

0 / 71 **0%**

The reCAPTCHA iframe logs "requestStorageAccess: Permission denied." on 69 pages.

Re-check Sep 27: **0/71**

Pages without console errors (ignoring the reCAPTCHA error)

59 / 71 **83%**

The other 12 pages have page-specific errors (404/401/500 resources, CSP block).

Re-check Sep 27: **59/71**

Pages under 3 s (desktop, nav start to load, 1st sample)

44 / 71 **62%**

2nd sample: 57/71. Median 1st sample 2752 ms; slowest 8696 ms (/profile/rewards).

Re-check Sep 27: **56/71** · Re-crawl 2nd sample 58/71; median 2568 ms.

Pages without mobile overflow (390x844)

71 / 71 **100%**

Re-check Sep 27: **71/71**

Buttons that do what they should

26 / 31 **84%**

Crawl click tests on mittenclub.shopmitten.com. 5 failed: Validate pill desktop and mobile (no response), home store name (no response), sidebar SIGN UP TODAY (JS error), store SHOP NOW (error toast). 14 not tested (4 not clickable, 10 submit buttons inventoried only).

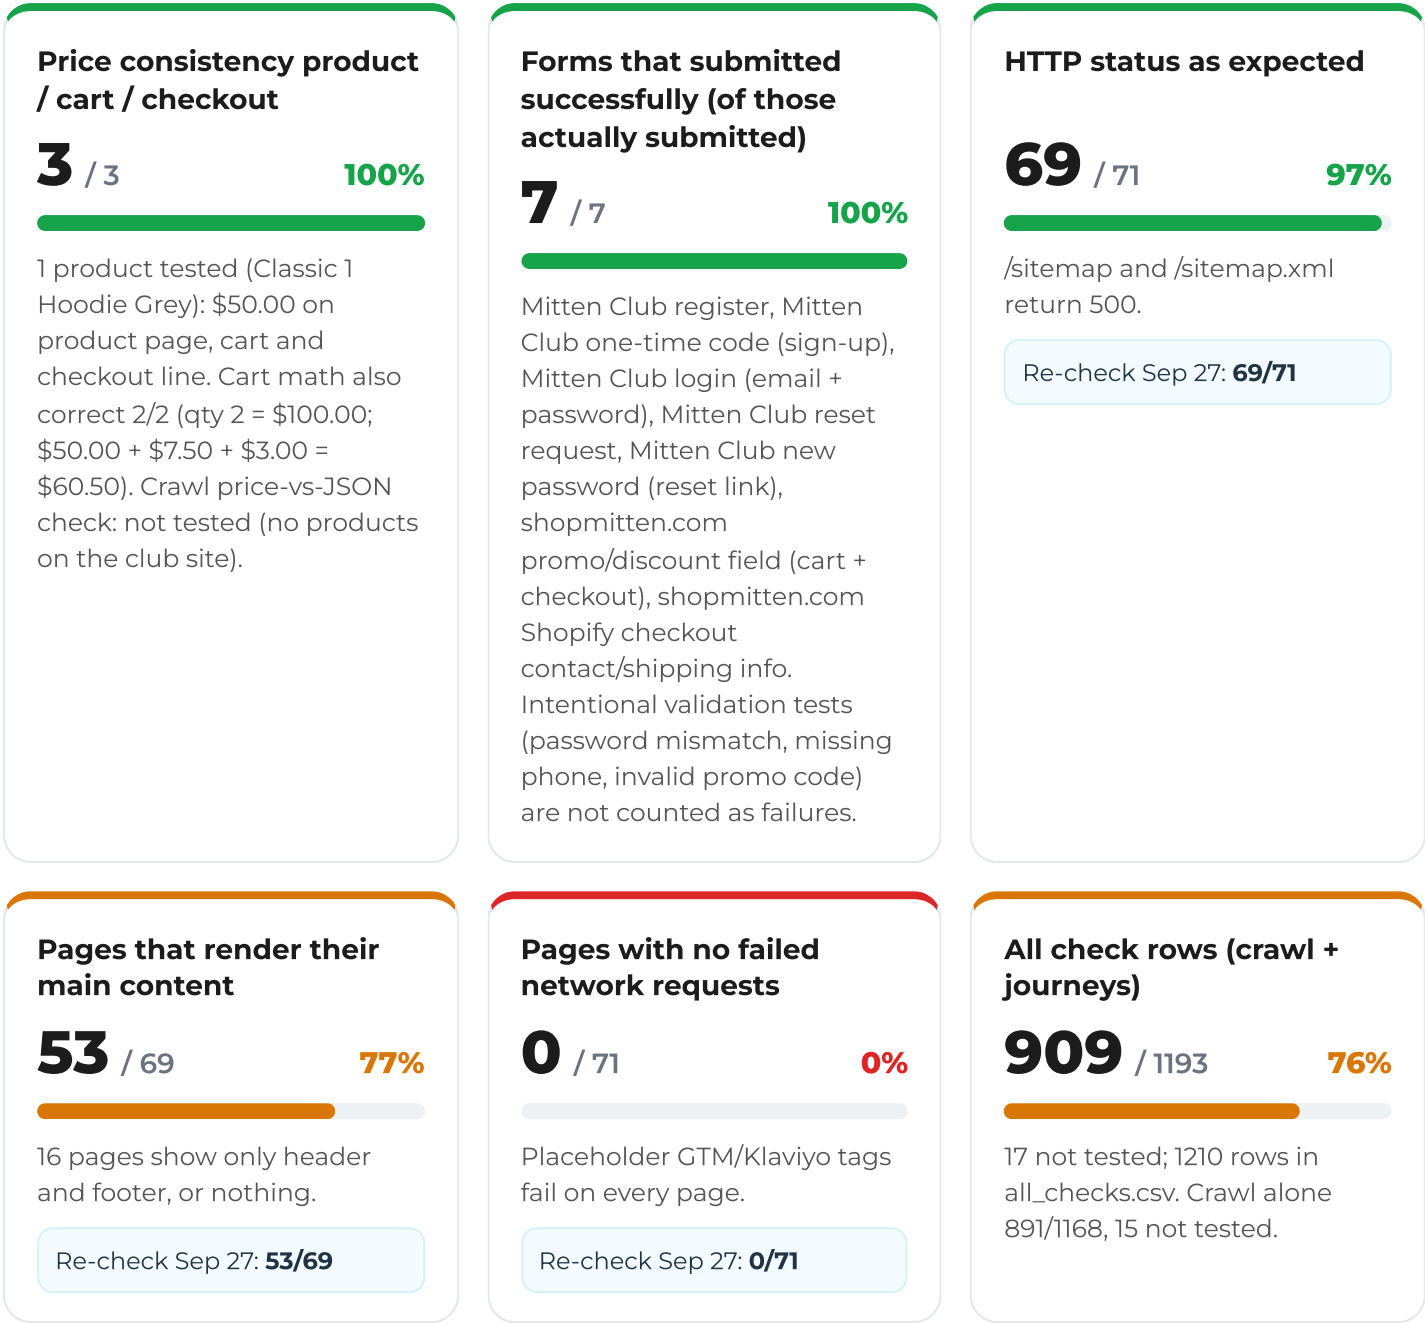

All 5 failing buttons re-tested Sep 27: all 5 still fail.

Customer journeys completed (S + C)

18 / 25 **72%**

Shop 7/10, Mitten Club 11/15.

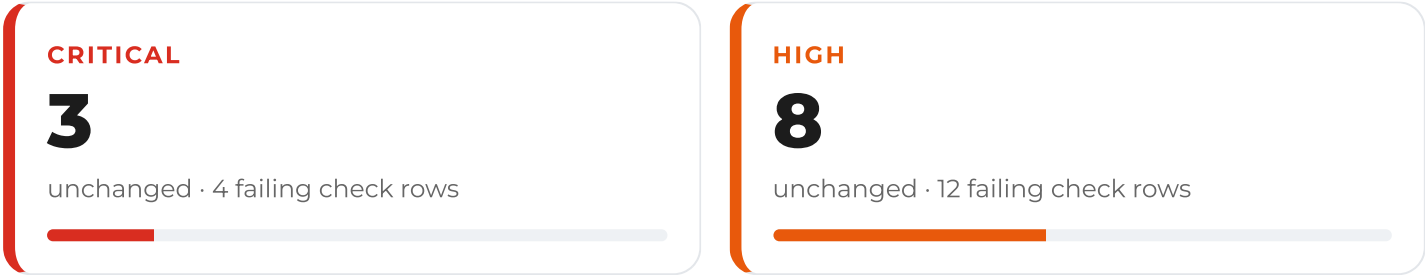

Not tested: 2 (S10 shop newsletter, C3 product verification). 9 of the 18 passes had friction or gaps (the C14 password-reset friction note was withdrawn after re-verification: a success toast is shown).

Other facts from the journeys: home page to payment step on shopmitten.com took 5 clicks; guest checkout does not require a phone number.

03

Severity summary

MEDIUM**18**

was 19 · 245 failing check rows

LOW**10**

unchanged · 23 failing check rows

REMOVED AFTER RE-VERIFICATION

1 issue withdrawn as incorrect (the behaviour works as intended on re-test). It has been removed from this report.

FIXED SINCE FIRST TEST

Fixed since first test: none. Every remaining issue still reproduced on Sep 26, 11:55 PM to Sep 27, 12:12 AM PT, except the one marked could not re-verify.

NOT RE-VERIFIED (KEPT, NEEDS PHONE CODE)

- [M-3](#) Sign-up code step is confusing and ends looking logged out

Issue count before re-verification: 40 (3 Critical, 8 High, 19 Medium, 10 Low). After: 39 (3 Critical, 8 High, 18 Medium, 10 Low). The removed issue had no failing check rows, so no scorecard metric changed.

05 Usability analysis

Written from the point of view of a shopper who wants to get from "I like this brand" to "I bought it and I'm earning points" with as little effort as possible. Steps follow the order a shopper meets them. Each point says what slows the shopper down and a concrete fix.

1. Arrive

- **What works.** shopmitten.com opens straight onto products: no age gate, cookie banner or newsletter pop-up. The announcement bar offers 15% off with code Mitten15 and free shipping over \$99, which is useful to know before browsing.

- **Announcement link rotates away.** The "Elevate Your Inbox" slide moves on about every 8 seconds and does not pause on hover, so a shopper reaching for it often misses it. *Fix:* pause the slider on hover and keyboard focus, or show one static message.
 - **Reward button in the way.** On smaller desktop windows (about 1024 px wide) the floating "Reward" launcher sits on top of hero text, and it covers product cards as the page scrolls ([M-10](#)). *Fix:* shrink it to an icon and move it clear of content.
 - **Mitten Club opens on a logo.** The first screen of mittenclub.shopmitten.com is only the logo. A visitor has to scroll to learn what the club is. *Fix:* one line on the first screen ("Earn points on every Mitten product you buy, redeem for merch") and a Join button.
-

2. Understand

- **The header asks you to "Validate", not to join.** A newcomer does not know what validating means, and in the crawl clicking it did nothing on desktop or mobile ([H-7](#)). *Fix:* header items "Join" and "Verify a product", with Verify linked to /verify.
 - **Two names for one action.** The header says "Validate", the page says "VERIFY PRODUCT". *Fix:* pick one word and use it everywhere, including emails.
 - **How to redeem is never explained.** The rewards page lists ways to earn (complete profile 300, app 200, scan campaigns 25-50, referral) but nothing says what points buy or how. *Fix:* a short "How it works: earn, then redeem" block on the home page and the rewards page, with the reward catalogue.
-

3. Find

- **No search.** There is no search box in the shop header, and /search shows a "LOREM IPSUM" placeholder with no results and no empty state ([H-1](#)). A shopper who knows what they want has to browse every collection. *Fix:* turn on header search with predictive results, build the results template, and add a "no results" message with popular products.
- **No sort.** The In Stock filter works, but there is no sort control and sort_by in the URL is ignored: \$5, \$10 and \$40 items appear before \$3 keychains when asking for price low to high ([H-2](#)). A price-conscious shopper has to scan the whole grid. *Fix:* add a sort menu (featured, price low-high, price high-low, newest) wired to Shopify sort_by.
- **Navigation works.** Hoodies and Jackets open the right collections.
- **Dispensary finder is one long list.** 498 stores with no search or filter, the tab title says "ShopMitten" and each address repeats the store name. Finding the closest store means scrolling. *Fix:* a city/ZIP search and "near me", a proper title, and addresses without the duplicated name.
- **Dead clicks in the store finder.** Store names in the home page list look clickable but do nothing ([L-2](#)), and on a store page SHOP NOW shows "Sorry! Cannot process your request. Try again" ([H-8](#)). *Fix:* link the names to the store page, and point SHOP NOW at the store's menu or at shopmitten.com, or hide it.

4. Choose

- **Sold-out sizes are unlabeled.** On Classic 1 Hoodie Grey, S/M/L are only struck through. Some shoppers will not read a strike-through as "sold out" and will click it. *Fix:* add "Sold out" text or a tooltip, and a "notify me" option.
- **Size guide is incomplete.** It is cm/kg only and leaves out 3XL. A US shopper has to convert units and still cannot check the largest size. *Fix:* inches/lbs alongside cm/kg, and every size listed.
- **Copy does not match the product.** The description mentions "design 3" and "black, white, and grey" on a grey-only product, which makes shoppers wonder whether they are ordering the right thing. *Fix:* rewrite the description for this product.
- **Broken label in the footer.** A social link reads "Translation missing: en.general.social.links.weedmaps". Small, but it looks unfinished. *Fix:* add the missing locale key.

5. Cart

- **What works.** The cart drawer opens on add; quantity 2 shows \$100.00; removing empties the cart; totals are right.
- **The cart's discount box does nothing.** Apply in the cart or drawer does not check the code and does not carry it to checkout ("Code is applied at checkout"), so the shopper types it twice and only finds out at checkout whether it works. *Fix:* apply the code to the cart through Shopify's discount handling and show the saving there, or remove the field from the cart.
- **Black band on the cart page.** A thick empty band sits above "YOUR CART", which pushes the cart down. *Fix:* remove the empty section.

6. Checkout

- **What works.** Guest checkout without a phone number, clear shipping choices (Economy \$7.50, 5-8 days; Standard \$10.50, 3-4 days), a transparent total (\$50.00 + \$7.50 + est. tax \$3.00 = \$60.50), and home to payment step in 5 clicks.
- **Marketing box pre-ticked.** "Email me with news and offers" is already ticked at checkout, and again on the Shopify sign-in page that the Reward widget opens. A shopper who does not look closely signs up without meaning to. *Fix:* leave it unticked.
- **Not tested:** payment, order confirmation and the confirmation email (no test card).

7. Join

- **Every "join" button leads to login.** "Join Today" and the footer "SIGN UP TODAY" open the login page, so the shopper needs an extra click to find "Sign Up" (C2, C16). *Fix:* send them to

/register.

- **Newsletter signup is broken on the club site.** The footer button goes to login, the mobile sidebar button throws a script error and opens nothing, and /newsletter is blank ([H-6](#)). A shopper who only wants news cannot sign up. *Fix:* one working email form, used in all three places.
- **The shop newsletter asks for too much.** It requires first and last name, email, mobile phone, interests and consent to texts and autodialed calls (Mitten Extracts and AIQ). Many shoppers stop at the phone field. *Fix:* email-only signup, with SMS as a separate opt-in.
- **Shop and club are two separate accounts.** The shop's Reward widget greets you with "WELCOME TO Mitten Club", but Join and Sign in open the Shopify customer login and show no points ([H-3](#)). A member cannot see their balance while shopping, and a new shopper may create the wrong account. *Fix:* connect the widget to the Mitten Club account (single sign-on or account linking) and show the points balance.
- **Registration surprises.** Phone is required but is not marked; "Phone is required" only appears after you leave it empty or press Register, digits are not formatted as you type, and the terms box is already ticked. *Fix:* mark required fields, format the phone number (or make it optional), and leave consent for the user to tick.

8. Verify

- **The code step feels unfinished.** After registering, a code goes to both email and phone while the URL stays on /register; resend is locked behind a countdown; the email subject says "one time code to login" even though you are signing up; the "Welcome to Mitten" email arrives before you have entered the code; and after entering it there is no confirmation. You land on the home page looking logged out. A shopper will wonder whether it worked. *Fix:* email subject "Your Mitten Club sign-up code", send the welcome email after verification, and after the code show "You're in" and go straight to the rewards page, logged in.
- **Product verification hides its rule.** On /verify the "exactly 10 characters" rule appears only after you leave the field, and VERIFY stays greyed out without saying why. Product scans are the repeatable way to earn points (the scan campaigns), so members will hit this screen again and again. *Fix:* helper text with an example and where to find the code on the pack, a character counter, and a button that turns on at 10 characters. A real verification was not tested (no product code available).

9. Rewards

- **A cold start.** A new member sees 0 points and no sign-up bonus. Tier (BRONZE, 1000 pts to Silver) appears only on the account page, not on Rewards. *Fix:* a small welcome bonus, and tier plus progress shown on the rewards page.
- **Member pages that are broken.** Collectibles shows only the words "trending" and "product lines" ([H-5](#)), and /campaign shows "Sorry We Detected An Issue" ([H-4](#)). Both are dead ends for an engaged member. *Fix:* fix them, or hide them until they have content.

10. Account

- **What works.** Profile data is correct, logout is one click, and login with email and password works without a code.
- **No communication preferences.** The profile has no newsletter or marketing setting, so a member cannot opt in or out. *Fix:* email and SMS toggles on Details.
- **Placeholder page title.** The reset page's browser tab reads "Reset password | brand name" (**L-9**). *Fix:* fill in the brand name.
- **Reset links can be reused and never expire (security, **SEC-2**).** A used reset link still opens the set-password form and accepts a new password (re-verified on Sep 27), and the token has no expiry. This is a risk to members' accounts rather than a speed issue, but it belongs at the top of the developer list.

Top 5 fixes, ranked by impact on a shopper

1. **Add working search to shopmitten.com.** Search box in the header, a real results page and a "no results" state, replacing the Lorem Ipsum template.
2. **Make joining one straight path.** Every Join or Sign up button goes to /register, the program is explained on the first screen, phone is marked as required (or made optional), and after the code the member sees "You're in" and lands logged in on Rewards.
3. **Connect the shop to the club account.** The shop's Reward widget signs in to the Mitten Club account and shows the points balance, instead of opening the Shopify customer login.
4. **Make product verification easy to find and use.** Wire the header "Validate" button to /verify, use one name for it, and show the 10-character rule with an example before the member types.
5. **Remove dead ends.** Fix or hide /campaign (error page), /collectibles (empty), the club newsletter (goes to login, script error, blank page) and the store-page SHOP NOW button (error toast).

06 Issues for developers

39 issues. Every failing row in all_checks.csv carries an issue_id and severity pointing to one of these. Crawl environment unless stated: desktop 1366x900 / mobile 390x844, headless Chromium (Playwright), 2026-09-26 9:38-10:45 PM PT. Journey environment: Chrome on the box desktop, ~10:21-10:49 PM PT. Each card shows its Sep 27 re-verification.

CRITICAL

SEC-1

Re-verified ✓

Shopify integration key sent to every visitor in the brandDetails cookie

URL	https://mittenclub.shopmitten.com/ (every response)
ENVIRONMENT	curl / python-requests from the box
ELEMENT / SELECTOR	HTTP response header Set-Cookie: brandDetails

STEPS TO REPRODUCE

1. curl -sI https://mittenclub.shopmitten.com/
2. URL-decode the Set-Cookie "brandDetails" value.

EXPECTED

No integration credentials in any client-visible cookie.

ACTUAL

brandDetails (Path=/, no HttpOnly or Secure flag in the captured header) holds the brand API JWT and an integration object {name:"shopify", primary_access_key:<32-hex, REDACTED>, secondary_access_key:"<store>.myshopify.com"}. Value was not used or tested. Re-verified Sep 27: still present, and the cookie still has no HttpOnly or Secure flag. The key has no shpat_/shpss_ prefix, so the developer should confirm whether it is secret. If it is a public Storefront key, severity can drop.

CONSOLE none

NETWORK GET / -> 200, Set-Cookie brandDetails=[REDACTED]

LIKELY CAUSE Server serializes the full brand config into a cookie. Confirm whether primary_access_key is a secret Shopify token; if so rotate it and stop sending integration keys to the browser.

Re-verified · 2026-09-26 11:55 PM PT: curl -s -D - https://mittenclub.shopmitten.com/: Set-Cookie brandDetails still sent to a fresh client with only Path=/ (no HttpOnly, no Secure). URL-decoded JSON still holds apiKey (a 280-char JWT) and integration {name:"shopify", primary_access_key: 32 hex chars, secondary_access_key: <store>.myshopify.com}. Values not used. Sanity note: the key has no shpat_/shpss_ prefix, so it could be a public Storefront or app key; Critical assumes it is secret, so the developer should confirm.

```
curl -s -D - https://mittenclub.shopmitten.com/ (re-checked 2026-09-26 11:55 PM PT)

Set-Cookie: brandDetails=.; Path=/ (no HttpOnly, no Secure)

URL-decoded value, excerpt. Credential values fully blacked out by the auditor; apiKey JWT omitted.
...."hubId":274,"hubName":"Mitten","hubCurrency":"USD","hasShipment":true,"roomId":385,"integration":{"primary_access_key":"[REDACTED]","name":"Shopify","secondary_access_key":"[REDACTED]","additional_access_key":{}}...
primary_access_key: 32 hex characters (fully redacted) · secondary_access_key: the Shopify store domain (fully redacted)
```

evidence_brandDetails_cookie_redacted.png

CRITICAL

SEC-2

Re-verified ✓

Password-reset link still usable after use; reset JWT has no expiry

URL	https://mittenclub.shopmitten.com (reset link from the reset email; token redacted)
ENVIRONMENT	desktop 1280x800, Chrome on the box desktop (manual journey), 2026-09-26 ~10:21-10:49 PM PT; re-verified with Playwright (Chromium headless, fresh contexts), 2026-09-27 12:04-12:07 AM PT
ELEMENT / SELECTOR	Set-new-password form (fields "Enter new password", "confirm new password", SAVE)

STEPS TO REPRODUCE

1. Open /reset-password and request a reset for a test account.
2. Open the emailed link and save a new password.
3. Open the same link again and save a different password.
4. Log in with the second password (succeeds).
5. Decode the JWT payload in the link (claims only; do not reuse it).

EXPECTED

A used link shows "link expired" and cannot set a password; reset tokens carry a short exp (for example 15-60 min) and are single-use server-side.

ACTUAL

The used link still renders the set-new-password form **and accepts a new password**. Re-verified on Sep 27: the original link from Sep 26 (already used once) set a new password about 1.5 hours later, and a fresh link accepted a second password after its first use. Login worked with each new password. The JWT payload is only {data, iat}, with **no exp claim**, so links never expire.

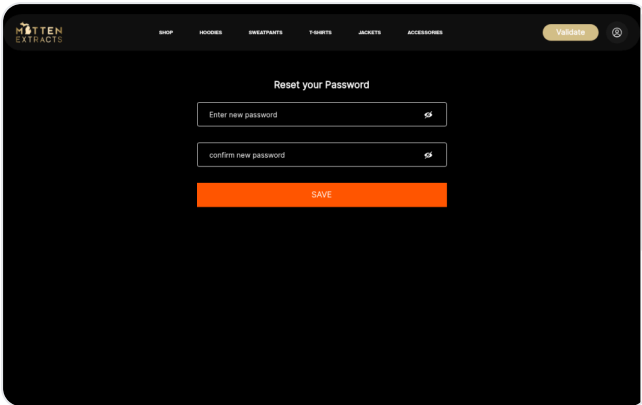

CONSOLE none relevant

NETWORK POST .../api/v1/resetPassword/<token> -> 200 {"success":true,"result":{"message":"Your password has been successfully updated, Please login again to continue"}} on both the first and the repeated submit (token redacted)

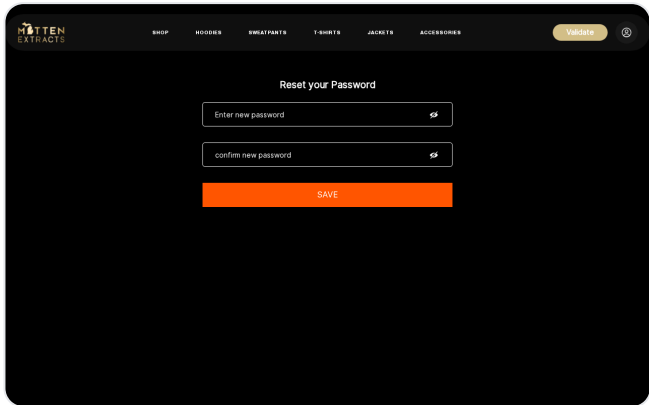

LIKELY CAUSE

The token is validated by signature only. The server neither marks it used nor ties it to the current password, so the "version" claim does not invalidate it after a reset. Add a short exp and single-use enforcement server-side, and invalidate outstanding tokens when the password changes.

Re-verified · 2026-09-27 12:04-12:07 AM PT: Stronger than first reported. (1) Reopened the ORIGINAL reset link (issued 10:41 PM PT Sep 26, already used in C14): form rendered, a new password was accepted, login with it succeeded and the previous password was rejected. (2) New reset request at 12:06 AM: link used once (API: "Your password has been successfully updated"), then reopened and a second password submitted: accepted again, login with it succeeded. JWT payload keys {data, iat}: no exp. Only test-inbox links on the test account; new password kept only in test-inbox.json.

C15_used_reset_link_still_shows_form.png

SEC2_fresh_reuse_open.png

CRITICAL SEC-3 Re-verified ✓

/aropay ships a hardcoded Aeropay DEV token and sandbox URL (page blank)

URL	https://mittenclub.shopmitten.com/aropay
ENVIRONMENT	desktop 1366x900, Chromium headless (Playwright), automated crawl 2026-09-26 9:38-10:45 PM PT
ELEMENT / SELECTOR	div#widget-box > iframe[src^="https://dev.aerosync.com/?token="]

STEPS TO REPRODUCE

1. Open https://mittenclub.shopmitten.com/aropay.
2. Inspect div#widget-box > iframe.

EXPECTED

Payment widget renders with a per-session token from the server, or the route is not public.

ACTUAL

Completely blank page (0 characters of text). The iframe points to `https://dev.aerosync.com/?token=<JWT, REDACTED>`. The hardcoded JWT carries claims `jti, exp, userId, userPassword, ClientId` (`exp 2023-09-25`, already expired). Framing is refused by CSP.

CONSOLE

```
Framing 'https://dev.aerosync.com/' violates the following Content Security Policy directive: "frame-ancestors 'self' http://localhost:* https://localhost:* https://dev-online.aeropay.com/". The request has been blocked.
```

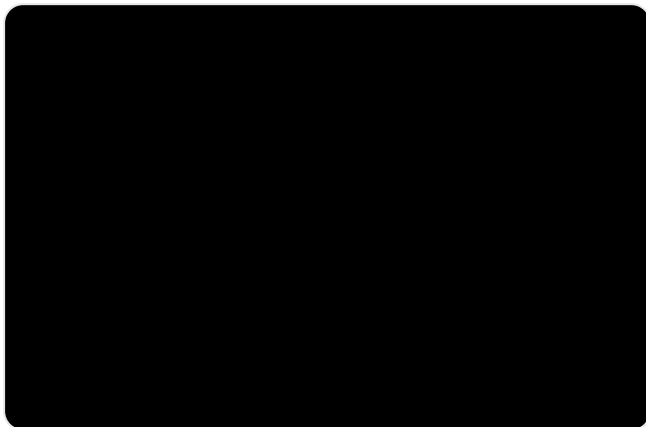

NETWORK

```
GET https://dev.aerosync.com/?token=<REDACTED> ->
net::ERR_BLOCKED_BY_RESPONSE
```

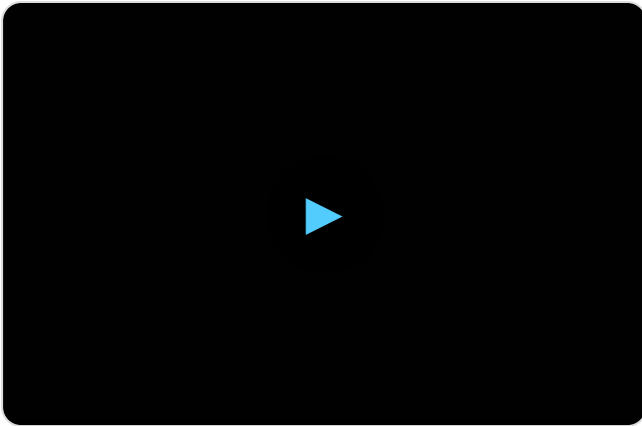

LIKELY CAUSE

Production build hardcodes a development sandbox URL and a static token that embeds a password claim. Remove the token from the bundle, rotate the credentials it contains, and remove or gate the route.

Re-verified · 2026-09-26 11:55 PM PT: `curl /aropay -> 200`; page chunk `aropay-*.js` still hardcodes `https://dev.aerosync.com/?token=<JWT>`. Claims: `jti, exp, userId, userPassword, ClientId, ClientName, sessionId`; `exp 2023-09-25` (expired). Re-crawl: body text 0 chars, console CSP `frame-ancestors error`, request `net::ERR_BLOCKED_BY_RESPONSE`.

Floating "Reward" button covers page text on smaller desktop windows

URL	https://shopmitten.com/ (all pages)
ENVIRONMENT	desktop 1024x525 browser viewport, Chrome on the box desktop (manual journey), 2026-09-26 ~10:21-10:49 PM PT; re-checked at 1280x800 with Playwright, 2026-09-27 12:01 AM PT
ELEMENT / SELECTOR	Floating rewards launcher (bottom right)

STEPS TO REPRODUCE

- 1. Open shopmitten.com and /search?q=hoodie in a window about 1024 px wide.
- 2. Look at the bottom-right corner, then scroll a collection page.

EXPECTED

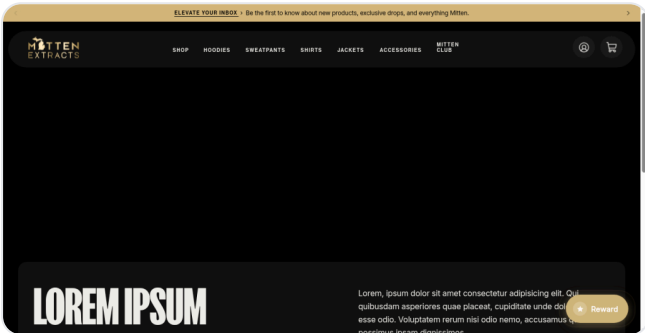

Launcher does not overlap readable content or controls at common desktop widths.

ACTUAL

At about 1024 px wide the fixed launcher sits on top of hero and paragraph text, and it covers product cards as the page scrolls. At 1280x800 it clears the hero copy at rest. It does not cover the size chips on product pages.

CONSOLE	not captured (manual journey)
NETWORK	not captured (manual journey)
LIKELY CAUSE	Fixed-position widget without content offset.
CHECK ROWS	no failing row (observed during the journeys as friction; see journeys.csv)

Re-verified · 2026-09-27 12:01 AM PT: Partly corrected. At 1280x800 the launcher (x 1131-1256, y 720-776) does not overlap hero copy or size chips at rest. The original journey window was actually 1024x525; there the launcher sits on hero paragraph text (S03 screenshot). It never covers the size chips (chips end at x=985). Issue text adjusted; severity arguably Low.

Large empty black band.

CONSOLE	not captured (manual journey)
NETWORK	not captured (manual journey)
LIKELY CAUSE	Empty hero/banner section in the cart template.
CHECK ROWS	no failing row (observed during the journeys as friction; see journeys.csv)

Re-verified • 2026-09-27 12:02 AM PT: /cart at 1280x800: black band of about 80 px between the header and the "YOUR CART" heading (heading top at 244 px).

Shop footer shows "Translation missing: en.general.social.links.weedmaps"

URL	https://shopmitten.com/ (footer)
ENVIRONMENT	desktop 1280x800, Chrome on the box desktop (manual journey), 2026-09-26 ~10:21-10:49 PM PT
ELEMENT / SELECTOR	Footer social icon link (Weedmaps)

STEPS TO REPRODUCE

- 1. Inspect the footer social links.

EXPECTED

Readable label (for example "Weedmaps").

ACTUAL

Link text "Translation missing: en.general.social.links.weedmaps".

CONSOLE	not captured (manual journey)
NETWORK	not captured (manual journey)
LIKELY CAUSE	Missing locale key in the theme.
CHECK ROWS	no failing row (observed during the journeys as friction; see journeys.csv)

Re-verified · 2026-09-27 12:00 AM PT: curl shopmitten.com: footer still contains "Translation missing: en.general.social.links.weedmaps".

LOW L-9 Re-verified ✓

Placeholder page titles ("Reset password | brand name", "ShopMitten")

URL	https://mittenclub.shopmitten.com/reset-password ; /dispensaries
ENVIRONMENT	desktop 1280x800, Chrome on the box desktop (manual journey), 2026-09-26 ~10:21-10:49 PM PT
ELEMENT / SELECTOR	head > title

STEPS TO REPRODUCE

- 1. Read the browser tab title.

EXPECTED

"Reset password | Mitten Club" etc.

ACTUAL

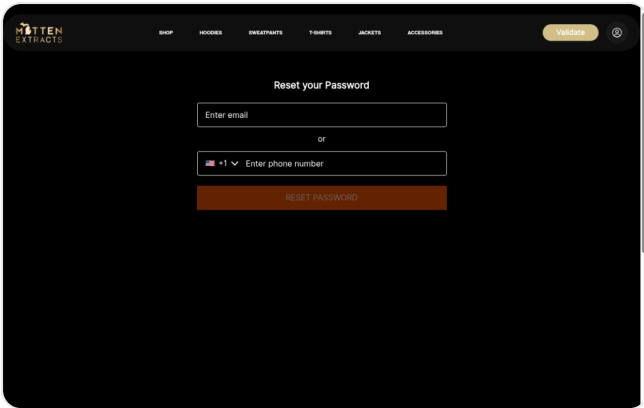

"Reset password | brand name"; dispensary page "ShopMitten".

CONSOLE	not captured (manual journey)
NETWORK	not captured (manual journey)
LIKELY CAUSE	Unfilled brand-name template variable.

CHECK ROWS

no failing row (observed during the journeys as friction; see journeys.csv)

Re-verified • 2026-09-26 11:59 PM PT: Page titles: /reset-password = "Reset password | brand name"; /dispensaries = "ShopMitten".

Reset email is all caps; assets load from Cloudinary /test/ and other-tenant folders

URL

Reset email;
https://res.cloudinary.com/dcwg74lfg/image/upload/.../brand/Mitten/tes
t/...

ENVIRONMENT

desktop 1280x800, Chrome on the box desktop (manual journey),
2026-09-26 ~10:21-10:49 PM PT; desktop 1366x900, Chromium headless
(Playwright), automated crawl 2026-09-26 9:38-10:45 PM PT

ELEMENT / SELECTOR

Email logo ; header hamburger

STEPS TO REPRODUCE

1. Open the reset email; inspect logo and hamburger image URLs (images.csv).

EXPECTED

Readable case; production asset paths.

ACTUAL

Email body all caps; logo path contains /test/; hamburger icon from the "Big Chief Extracts" test folder.

CONSOLE

n/a

NETWORK	n/a
LIKELY CAUSE	Templates and assets copied from test/other tenants.
CHECK ROWS	no failing row (observed during the journeys as friction; see journeys.csv)

Re-verified • 2026-09-27 12:06 AM PT: New reset email: body in capitals ("WE HAVE A REQUEST TO CHANGE YOUR PASSWORD! ..."), logo from .../brand/Mitten/test/site/...; home hamburger icon from .../Big%20Chief%20Extracts/test/logos/...

07 Not tested

ITEM	REASON
Payment, order placement, order confirmation page and email (shopmitten.com)	No test card was provided; checkout stopped at the payment step.
Real discount code (e.g. the advertised Mitten15)	Only the made-up code TESTCODE123 was entered, to see the error handling; no real code was applied.
Shop newsletter signup submit (S10)	Blocked by design: requires a mobile number plus consent to texts and autodialed calls.
Product verification with a real code (C3)	No real product code was available; only the length rule was observed.
Redeeming points	Account has 0 points and the site does not explain a redeem path.
Earning points (profile completion, app download, scans, referral)	Would need an app install, real product codes or a second person.
Shopify customer account creation or login via the Reward widget	The journey ended at the Shopify sign-in page.
Login by phone + password, and one-time-code login by email or SMS	Not exercised; sign-up code and email + password login were tested.
Continue with Google / Continue with Apple	Would require linking a real third-party account.
Contact, wholesale (with file uploads) and event registration forms; account deletion (/delete-account)	Would send messages to the brand or delete the account; inventoried only.

ITEM	REASON
Google Map zoom controls (3) and the desktop hamburger	Not clickable in the crawl: zoom controls hidden; hamburger is a mobile-only control (tested on mobile).
Product price vs JSON on mittenclub.shopmitten.com	The club site has no product pages; its /products.json is not a Shopify endpoint.
488 of 498 store-detail pages	10 sampled across the list; unknown names return HTTP 200, so a status-only sweep would prove nothing.
Automated crawl of shopmitten.com (links, images, alt text, console, speed, mobile overflow)	Scorecard crawl metrics cover mittenclub.shopmitten.com only; shopmitten.com was covered by the manual journeys.
Journeys on mobile, and in Safari or Firefox	Journeys ran on desktop Chrome 1280x800 only; the crawl covered mobile layout and a few mobile buttons.
Accessibility beyond alt text (keyboard, focus order, contrast, screen reader)	Not in scope for this run.
Re-verification of M-3 (sign-up code flow)	Needs a brand-new sign-up with a second phone number; the only fictional test number is already on the test account. Kept as could not re-verify.

08 Method & files

- **all_checks.csv**: crawl checks plus journey rows in one schema, with severity and issue_id on every failure (JWTs redacted).
- **reverify.csv**: one row per original issue with verdict (confirmed / incorrect / fixed-since / could-not-reverify), evidence and time (PT).
- Re-verification: curl for headers, status codes and page source; Playwright (Chromium headless, fresh contexts) for clicks, forms, the reset-link flow, the Reward widget and a full 71-URL re-crawl. Checkout stopped before payment. No messages were sent and no reviews were posted. Only reset links in the test inbox were opened.
- Secrets (tokens, cookie values, integration keys, test credentials) are redacted everywhere in this report.
